PABLO VICENTE REYES PINO

Data Scientist • AI Engineer • Machine Learning Specialist
Santiago, Chile | +56 9 6918 7434 | preyesp09@gmail.com
linkedin.com/in/pablo-reyes-pino | github.com/Rxyxs

PROFESSIONAL SUMMARY

Data Scientist and AI Engineer focused on transforming complex data into strategic operational solutions. Comprehensive experience developing end-to-end analytical solutions, spanning Machine Learning models, demand forecasting, anomaly detection, and process optimization. Expert in building scalable tools with Python, SQL, PyTorch, and Power BI that automate decision-making and optimize resource allocation.

PROFESSIONAL EXPERIENCE

Buses Vule S.A. (Red Metropolitana de Movilidad) Santiago, Chile
Data Analyst / Procurement & Fuel Management January 2025 – April 2026

- **Advanced Analytics, AI & Forecasting:** Developed and deployed anomaly detection models to identify fuel losses/deviations and demand forecasting models to optimize procurement of critical operational supplies.
- **Data Engineering & ETL (Python):** Engineered ETL pipelines using Pandas and Regex to automate weekly inventory reconciliations, fleet fuel efficiency consolidation, and purchasing reports, reducing processing time by 70%.
- **Operational Digitalization (AppSheet):** Designed and deployed a mobile/web architecture across 20 depots and 2,094 buses, eliminating paper records through a relational data model featuring dynamic validation rules and automated operational KPI calculations.
- **Business Intelligence & ERP Integration:** Built executive dashboards in Power BI for real-time monitoring of key fleet metrics, automating reporting workflows and data synchronization with Softland ERP.

MIT International Science & Technology Initiatives (MISTI) – U. Mayor Santiago, Chile
Python Programming Instructor January 2022 – February 2022

- **Technical Leadership & Instruction:** Co-led the bilingual (English/Spanish) delivery of Python programming and algorithm workshops in collaboration with the MIT team.
- **Pedagogical Design:** Adapted complex computer science concepts into dynamic learning content focused on software engineering best practices and algorithmic problem-solving.

PROJECTS

Predictive Fleet Maintenance (RUL) 2026
Hybrid Cox Proportional Hazards and Gradient Boosting model estimating Remaining Useful Life (RUL) of critical machinery components, integrating SHAP values for failure mode diagnostics and planned maintenance optimization.

Customer Churn MLOps Platform 2026
End-to-end platform featuring MLflow for experiment tracking, inference API built with FastAPI, Docker containerization, and an interactive Streamlit simulator for business impact evaluation.

YOLOv8 Efficiency Evaluation for Edge AI (B.S. Thesis Project) 2026
Redesigned YOLOv8 head using Depthwise Separable Convolutions: achieved a 68% parameter reduction and a ∼10x latency acceleration on Raspberry Pi 4, benchmarking mAP, IoU, FPS, and GFLOPs.

EDUCATION

Universidad Mayor Santiago, Chile
Professional Degree: Data Scientist • B.S. in Data Science 2020 – 2026

TECHNICAL SKILLS

- **Machine Learning & AI:** Predictive modeling, classification, regression, time series analysis, forecasting, anomaly detection, survival analysis, Deep Learning, Computer Vision (YOLOv8, PyTorch), NLP, GenAI / LLMs.
- **Languages & Databases:** Python (Pandas, Polars, NumPy, Scikit-learn, TensorFlow, PyTorch), SQL / MySQL, R, C++.
- **Optimization & Algorithms:** Google OR-Tools (VRP/Routing), genetic algorithms (DEAP), SciPy, GeoPandas, Uber H3.
- **Data Engineering & MLOps:** ETL pipelines, FastAPI, MLflow, Streamlit, Docker, Git / GitHub, AppSheet, ERP (Softland), Cloud (GCP, Azure, AWS), Edge AI (Raspberry Pi 4, Jetson Nano).
- **Business Intelligence:** Power BI (DAX, Power Query), Looker Studio, Advanced Excel (VBA/Macros), data storytelling.

Languages: English (B2, Upper-Intermediate) • Spanish (Native).
